Estrogen Receptor-β as a Potential Target for Colon Cancer Prevention: Chemoprevention of Azoxymethane-Induced Colon Carcinogenesis by Raloxifene in F344 Rats. Naveena B. Janakiram, Vernon E. Steele and Chinthalapally V. Rao
Inflammation-Associated Serum and Colon Markers as Indicators of Dietary Attenuation of Colon Carcinogenesis in ob/ob Mice. Royce Lynn A. Mentor-Marcel, Gerd Bobe, Kathleen G. Barrett, Matthew R. Young, Paul S. Albert, Maurice R. Bennink, Elaine Lanza and Nancy H. Colburn
Selenium and Risk of Bladder Cancer: A Population-Based Case-Control Study. Kristin Wallace, Karl T. Kelsey, Alan Schned, J. Steven Morris, Angeline S. Andrew and Margaret R. Karagas
Growth Inhibition and Regression of Lung Tumors by Silibinin: Modulation of Angiogenesis by Macrophage-Associated Cytokines and Nuclear Factor-κB and Signal Transducers and Activators of Transcription 3. Alpna Tyagi, Rana P. Singh, Kumaraguruparan Ramasamy, Komal Raina, Elizabeth F. Redente, Lori D. Dwyer-Nield, Richard A. Radcliffe, Alvin M. Malkinson and Rajesh Agarwal
Anthocyanins in Black Raspberries Prevent Esophageal Tumors in Rats. Li-Shu Wang, Stephen S. Hecht, Steven G. Carmella, Nanxiong Yu, Bethany Larue, Cassandra Henry, Colleen McIntyre, Claudio Rocha, John F. Lechner and Gary D. Stoner
About the Cover
The cover image is a photomicrograph (60X magnification) of immunocytochemical staining for estrogen receptor-β (ER-β) expression in cultured human HCT-116 colon cancer cells. Associated with colon carcinogenesis, ER-β expression is a potential target for colorectal cancer prevention and treatment. The receptor's expression in human colon cancer cells is highly localized in the nuclei (intense brownish, dark staining). Sporadic colorectal cancer models suggest that ER-β expression (protein and RNA) is selectively associated with cells of colorectal tumors but not normal-appearing epithelia. Furthermore, the selective estrogen-receptor modulator raloxifene suppressed human colon cancer cell growth in vivo and in chemically induced colon carcinogenesis in rats. These findings support the promise of ER-β as a target for colorectal cancer chemoprevention. See article by Janakiram et al. (beginning on page 52) for more information.
