TARGETING P53-NULL NEUROBLASTOMAS THROUGH RLIP76

Jyotsana Singhal, Sushma Yadav, Lokesh Dalasanur Nagaprashantha, Rit Vatsyayan, Sharad S. Singhal, and Sanjay Awasthi

RESULTS FROM A DOSE–RESPONSE STUDY USING 3,3'–DIINDOYLMETHANE IN THE K14–HPV16 TRANSGENIC MOUSE MODEL: CERVICAL HISTOLOGY

Daniel W. Sepkovic, Johann Stein, Antoine D. Carlisle, H. Barbara Ksieski, Karen Auborn, Laura Raucci, Themba Nyirenda, and H. Leon Bradlow

GARLIC CONSTITUENT Diallyl Trisulfide SUPPRESSES X-LINKED INHIBITOR OF APOPTOSIS PROTEIN IN PROSTATE CANCER CELLS IN CULTURE AND IN VIVO

Su-Hyeong Kim, Ajay Bommareddy, and Shivendra V. Singh

CHEMOPREVENTION OF INTESTINAL POLYPS IN APCmin MICE FED WITH WESTERN OR BALANCED DIETS BY DRINKING ANNURCA APPLE POLYPHENOL EXTRACT

Lucia Fini, Giulia Piazz, Yahya Daoud, Michael Selgrad, Shinji Maegawa, Melissa Garcia, Vincenzo Fogliano, Marco Romano, Giulia Graziani, Paola Vitaglione, Susanne W. Carmack, Antonio Gasbarrini, Robert M. Genta, Jean-Pierre Issa, C. Richard Boland, and Luigi Ricciardiello

Clonal Structure of Carcinogen-Induced Intestinal Tumors in Mice

Andrew T. Thliveris, Linda Clipson, Alanna White, Jesse Waggoner, Lauren Plesh, Bridget L. Skinner, Christopher D. Zahm, Ruth Sullivan, William F. Dove, Michael A. Newton, and Richard B. Halberg

Chemoprevention of Azoxymethane/Dextran Sodium Sulfate–Induced Mouse Colon Carcinogenesis by Freeze-Dried Yam Sanyaku and its Constituent Diosgenin

Norihiko Miyoshi, Tomoki Nagasawa, Ryota Mabuchi, Yumiko Yasui, Keiji Wakabayashi, Takuji Tanaka, and Hiroshi Ohshima

Melanoma Prevention Using Topical PBISe

Chin-Ying Chung, SubbaRao V. Madhunapantula, Dhimant Desai, Shantu Amin, and Gavin P. Robertson

ABOUT THE COVER

The cover features an image of RNA sequencing (RNA-Seq) results for a processed transcript of the mucin 5AC gene (MUC5AC, foreground), a potentially important smoking- and lung cancer-related gene. The output is superimposed on an image of human ciliated columnar bronchial epithelial cells obtained by endoscopic brushings of the mainstem bronchi (100X, modified Wright-Giemsa stain). The MUC5AC read coverage plot displays reads aligning to the transcript normalized by the total number of reads on the y-axis versus the genomic coordinates on the x-axis. The MUC5AC processed transcript shows marked upregulation in healthy current smokers compared with never smokers and downregulation in smokers with lung cancer compared with smokers having benign lung disease. The detection of MUC5AC expression highlights the advantage of RNA-Seq because the transcript is not annotated in RefSeq and there are no probes on the Affymetrix Exon 1.0 ST microarray to interrogate it. RNA-Seq is one of several cutting-edge next-generation sequencing platforms producing tremendous advances in the biology of cancer and premalignancy that promise to lead to new, effective approaches for cancer therapy and prevention. See articles by Beane et al. (beginning on page 803) and Blackburn (beginning on page 787) for more information.
