**RESEARCH ARTICLES**

349  Menopause Is a Determinant of Breast Adipose Inflammation  
Neil M. Iyengar, Patrick G. Morris, Xi Kathy Zhou, Ayca Gucalp, Dilip Girı, Michael D. Harbus, Domenick J. Falcone, Margaret D. Krasne, Linda T. Yahdat, Kotha Subbaratamiah, Monica Morrow, Clifford A. Hudis, and Andrew J. Dannenberg

359  Omega-3 and Omega-6 Fatty Acids in Blood and Breast Tissue of High-Risk Women and Association with Atypical Cytomorphology  
Brandon H. Hidaka, Debra K. Sullivan, Bruce F. Kimler, Carola M. Zalles, and Carol J. Fabian

365  CXCR4 Is a Novel Target of Cancer Chemopreventative Isothiocyanates in Prostate Cancer Cells  
Kozue Sakao, Avani R. Vyas, Sreenivasa R. Chinni, Ali I. Amjad, Rahul Parikh, and Shivendra V. Singh

375  Plumbagin Inhibits Prostate Carcinogenesis in Intact and Castrated PTEN Knockout Mice via Targeting PKCα, Stat3, and Epithelial-to-Mesenchymal Transition Markers  
Bilal Bin Hafeez, Joseph W. Fischer, Ashok Singh, Weixiong Zhong, Ala Mustafa, Louise Meske, Mohammad Ozair Sheikhan, and Ajit Kumar Verma

387  Regulation of VDR Expression in Apc-Mutant Mice, Human Colon Cancers and Adenomas  
Charles Giardina, Masako Nakanishi, Awaad Khan, Anton Kuratnik, Wanni Xu, Bruce Brenner, and Daniel W. Rosenberg

400  Prevention of Carcinogen and Inflammation-Induced Dermal Cancer by Oral Rapamycin Includes Reducing Genetic Damage  
Vinh Dao, Srilakshmi Pandeswara, Yang Liu, Vincenti Hurez, Sherry Dodds, Danielle Callaway, Aiju Liu, Paul Hatsy, Zelon D. Sharp, and Tyler J. Cariel

410  Metabolomic Markers of Altered Nucleotide Metabolism in Early Stage Adenocarcinoma  
William R. Wilkoff, Dmitry Grapov, Johannes F. Fahrmann, Brian DeFelice, William N. Rom, Harvey I. Pass, Kyoungmi Kim, UyenThai Nguyen, Sandra L. Taylor, David R. Gandara, Karen Kelly, Oliver Fiehn, and Suzanne Miyamoto

419  Fenretinide Perturbs Focal Adhesion Kinase in Premalignant and Malignant Human Oral Keratinocytes. Fenretinide's Chemopreventive Mechanisms Include ECM Interactions  
Byungdo B. Han, Suyang Li, Meng Tong, Andrew S. Holpuch, Richard Spinney, Daren Wang, Michael B. Border, Zhongfa Liu, Sachin Sarode, Ping Pei, Steven P. Schwendeman, and Susan R. Mallery

431  Novel Evidence for Curcumin and Boswellic Acid–Induced Chemoprevention through Regulation of miR-34a and miR-27a in Colorectal Cancer  
Shusuke Toden, Yoshinaga Okugawa, Constanze Buhrmann, Durgha Nattamai, Esperanza Anguiano, Nicole Baldwin, Mehdi Shakedai, C. Richard Boland, and Ajay Goel

444  Nrf2-Dependent Suppression of Azoxymethane/Dextran Sulfate Sodium–Induced Colon Carcinogenesis by the Cinnamon-Derived Dietary Factor Cinnamaldehyde  
Min Long, Shasha Tao, Montserrat Rojo de la Vega, Tao Jiang, Qing Wen, Sophia L. Park, Donna D. Zhang, and Georg T. Wondrak
Table of Contents

455 Hepatitis B Virus X Protein Stabilizes Cyclin D1 and Increases Cyclin D1 Nuclear Accumulation through ERK-Mediated Inactivation of GSK-3β

Xiangmei Chen, Ling Zhang, Sujun Zheng, Ting Zhang, Meng Li, Xiaolei Zhang, Zhenzhen Zeng, Malcolm A. McCrae, Jingmin Zhao, Hui Zhuang, and Fengmin Lu

464 Sarsaparilla (Smilax Glabra Rhizome) Extract Inhibits Cancer Cell Growth by S Phase Arrest, Apoptosis, and Autophagy via Redox-Dependent ERK1/2 Pathway

Tiantian She, Liske Qu, Lixin Wang, Xingxin Yang, Shuo Xu, Junnan Feng, Yujing Gao, Chuanke Zhao, Yong Han, Shaoqing Cai, and Chengchao Shou

ABOUT THE COVER

Colorectal cancer is the third most common form of cancer in the United States and accounts for approximately 50,000 deaths annually. Although colonoscopic screening programs have significantly reduced cancer rates, colorectal cancer continues to inflict a significant health burden on the population. Identifying dietary agents and supplements that reduce the risk of colorectal cancer development could offer a powerful accompaniment to present screening efforts. It is, however, important to understand the context and limitations with which specific cancer prevention agents function in order to apply them effectively to responsive patient populations. Vitamin D has been implicated in colon cancer prevention, but its activity has proven difficult to establish in human intervention trials. Evidence has been obtained that colonic lesions may lose their responsiveness to vitamin D at early stages of development. The cover illustration depicts a colon tumor formed in the ApcMUT mouse analyzed for expression of the high affinity vitamin D receptor, VDR. VDR expression is lost in tumors formed in this preclinical model, which makes them less responsive to the gene regulatory actions of vitamin D. For more information on the potential mechanisms underlying VDR suppression, see the article by Giardina et al. (beginning on page 387).
