## REVIEW

523  PGC-1α as a Biomarker of Physical Activity-Protective Effect on Colorectal Cancer  
Fernanda de Souza-Teixeira, Jessica Alonso-Molero, Carlos Ayán, Laura Vilorio-Marques,  
Antonio Jose Molina, Carmen Gonzalez-Donquiles, Veronica Davila-Ratista, Tania Fernandez-Villa,  
Jose Antonio de Paz, and Vicente Martin

## RESEARCH ARTICLES

535  Sex-Specific Association between Family History of Diabetes and Risk of Colorectal Cancer: Two Prospective Cohort Studies  
Wenjie Ma, Mingyang Song, Ane Sørlie Kværner, Jennifer Prescott, Andrew Chan, Edward Giovannucci, and Xuehong Zhang

545  Change in Inflammatory Biomarkers and Adipose Tissue in BRCA1/2+ Breast Cancer Survivors Following a Yearlong Lifestyle Modification Program  
Kathleen M. Sturgeon, Wayne Foo, Mariane Heroux, and Kathryn Schmitz

551  High Growth Rate of Pancreatic Ductal Adenocarcinoma in CDKN2A-p16-Leiden Mutation Carriers  
Isaura S. Ibrahim, Martin N. Wasser, Yinghui Wu, Akin Inderson, Wouter H. de Vos tot Nederveen Cappel,  
Hans Moreau, Frederik J. Hes, Roeland A. Veenendaal, Hein Putter, Shirin Feshtali, Anneke M. van Mil,  
Nelleke A. Cruis, Rob A. Tollenaar, Wilma Bergman, Bert A. Ronsing, and Hans F.A. Vasan

557  Breast Hormone Concentrations in Random Fine-Needle Aspirates of Healthy Women Associate with Cytological Atypia and Gene Methylation  
Oukseub Lee, Richard E. Heinz, David Ivancic, Miguel Muzzio, Robert T. Chatterton, Carola M. Zalles,  
Kara Keeney, Belinda Phan, Dachao Liu, Denise Scholiens, Mary Jo Fackler, Vered Stearns,  
Saraswati Sukumar, and Seema A. Khan

569  Targeting Colon Luminal Lipid Peroxidation Limits Colon Carcinogenesis Associated with Red Meat Consumption  
Océane C.B. Martin, Nathalie Naud, Sylviane Taché, Laurent Debranver, Sylvie Chevolleau, Jacques Dupuy,  
Céline Chantelauze, Denis Durand, Estelle Pujos-Guillot, Florence Blas-Y-Strada, Christine Urbano,  
Gunter G.C. Kuhnle, Véronique Santé-Houtellier, Thierry Sayed, Didier Viala, Adeline Blot, Nathalie Meunier,  
Pascal Schlitch, Didier Attiax, Françoise Guézaud, Valérie Scislowski, Denis E. Corpet, and Fabrice H.F. Pierre

581  Detection and Genotyping of HPV DNA in a Group of Unvaccinated Young Women from Colombia: Baseline Measures Prior to Future Monitoring Program  
Devi Puerto, Viviana Reyes, Cristina Lozano,  
Lina Buitrago, Diego Garcia, Raúl H. Murillo,  
Nubia Muñoz, Gustavo A. Hernandez, Laura Sanchez,  
Carolina Wisenber, and Alba L. Combita

## RETRACTION

593  Retraction: Gambogic Acid Inhibits STAT3 Phosphorylation through Activation of Protein Tyrosine Phosphatase SHP-1: Potential Role in Proliferation and Apoptosis  
September 2018

* Volume 11  
* Number 9
ABOUT THE COVER

In 2015, the World Health Organization classified the consumption of red meat as probably carcinogenic to humans, mainly for colon cancer. The associated recommendation was to limit the red meat intake to 500 g per week, but not all socio-economic classes are receptive to such nutritional messages. Other means are thus needed to limit cancer risk in all the population. Heme iron is a major actor in the red meat-induced promotion of colon cancer: it catalyses lipid peroxidation and produces cytotoxic and genotoxic aldehydes that could promote carcinogenesis. It was speculated that enrichment of red meat with antioxidant agents using a marinade would decrease meat-associated cancer risk via limitation of the heme induced luminal peroxidation. The cover shows the histological section of an adenoma from the intestine of a female Apc(Min) mice (H&E staining). The adenoma number was reduced in mice given marinated beef meat compared with mice given non-marinated meat. This protection provided by the marinade was associated with the decrease of fecal lipid peroxidation in different cancer animal models and in the stools of human volunteers, without any adverse organoleptic effect.
